

WILL I HAVE A HEALTHY BABY?

Genetic Counseling

If you are pregnant or thinking about having a baby, you may have questions about birth defects or other health problems.

Anyone can have a child with a birth defect or genetic disorder, and some reasons could be that:

- Medical problems run in some families
- Some genetic disorders are more common in certain ethnic / racial groups, for example:
 - Whites (Northern European) – CYSTIC FIBROSIS
 - Greeks, Italians, and Southeast Asians – THALASSEMIA
 - African Americans – SICKLE CELL ANEMIA
 - Ashkenazi Jews – TAY-SACHS DISEASE
- Drugs, alcohol or other medications were used during pregnancy

Even though sometimes we find a reason why, the cause of many birth defects is unknown.

Genetic counseling may help you:

- Better understand your chances of giving birth to a child with a birth defect or genetic disorder
- Answer questions and discuss medical concerns about your “family tree”
- Understand your choices for finding and treating birth defects or health problems in your baby
- Get accurate, up-to-date information about genetic disorders, birth defects and available testing
- Plan for the care of a child born with a birth defect or other health problems

The genetics doctor and genetic counselor will respect your feelings and beliefs.

Genetic counseling may be most helpful if:

- You are pregnant or want to become pregnant and want to learn about testing for birth defects or genetic conditions
- You are pregnant and tests show the baby may have a problem
- You have a family history of a genetic disorder or birth defect
 - For example: Down syndrome, a bleeding disorder, cystic fibrosis, spina bifida (open spine), or muscular dystrophy
- You are worried that your medical condition could be passed on to your child
- You have had 3 or more miscarriages or cannot become pregnant
- You and your partner are closely related by blood (like first cousins)
- You have used alcohol or drugs during your pregnancy
- You are taking medicines for a health condition and are pregnant or want to become pregnant
- You are concerned about being exposed to radiation or chemicals

After the counseling, a review of what was discussed can be sent to you, your healthcare provider, or other family members at *your request*.

In Washington State, Genetic Counseling is available to all who want it. Each clinic sets its own fees, but can help you if you cannot afford the counseling session.

If you have any questions or concerns, please contact your primary care provider or local genetics clinic for assistance. To find the nearest genetics clinic in Washington State, either look on the Washington State Department of Health – Genetics Services Section website, <http://www.doh.wa.gov/cfh/mch/Genetics>, or call 253-395-6741.

This publication is available on the Washington State Department of Health Website, <http://here.doh.wa.gov>.

Dear Colleague,

The Washington State Department of Health (DOH) provides print-ready files (PDFs) of health education materials. To ensure that the original quality of the piece is maintained, please read and follow the instructions below and the specifications included for professional printing.

- **Use the latest version.** DOH materials are developed using the most current information available, are checked for clinical accuracy, and are field tested with the intended audience to ensure they are clear and readable. DOH programs make periodic revisions to educational materials, so please check this web site to be sure you have the latest version. DOH assumes no responsibility for the use of this material or for any errors or omissions.
- **Do not alter.** We are providing this artwork with the understanding that it will be printed without alterations and copies will be free to the public. Do not edit the text or use illustrations or photographs for other purposes without first contacting us. Please do not alter or remove the DOH logo, publication number or revision date. If you want to use a part of this publication for other purposes, contact the Office of Health Promotion first.
- **For quality reproduction:** Low resolution PDF files are intended for black and white or color desktop printers. They work best if you are making only one or two copies. High resolution PDF files are intended for reproducing large quantities and are set up for use by professional offset print shops. The high resolution files also include detailed printing specifications. Please match them as closely as possible and insist on the best possible quality for all reproductions.
